Track A run #1

Fabric 2.5.9 · runner ubuntu-latest · commit a9dbb1f

§6.4 sentence stems, filled

- **S1 (source-system agnosticism).** 6 events originating from four distinct simulated source systems (ERP, MES, TMS/WMS, LIMS) plus a retailer system were admitted through an identical validation path; the chaincode contains no source-system-specific branching.
- **S1 (lineage).** Lineage reconstruction for lot LOT-C returned 6 nodes and 5 edges, with backward tracing resolving to origin Create events [C1, C2].
- **S1 (invariants).** Two deliberate violations were rejected at admission with the violated invariant named in the rejection message: custody continuity and recall lock.
- **S2 (audit pack).** A regulator-facing audit pack for lot LOT-D containing 4 ordered headers with per-event policy references was generated in 394 ms; payload verification against the off-ledger store returned 4/4 PASS.
- **S2 (passport).** A product passport view for the same lot reported custodian Retailer, 1 attestation(s), recall status none, governed by policy v1.0.
- **S2 (tamper).** A single-byte modification of a stored payload caused verification to fail, demonstrating that off-ledger tampering is detectable from anchored evidence alone.
- **S3 (policy-hash anchoring).** Across a policy change, 3 records bound policy v1.0 and 2 records bound v2.0; all 5 bindings matched the version in force at

- submission time (binding correctness: true), and re-hashing the policy artifacts reproduced the anchored digests (verifiability: true).
- **Totality.** A submission attempted before any policy was anchored was rejected: totality is enforced as a precondition, not a default.

Rejection messages (verbatim, for \$6.1)
